

FARRUKH ALI KHAN

Data & IT Operations Analyst | SQL · Power BI · Python · IT Infrastructure · Excel

Toronto, ON | farrukh3ak@gmail.com | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Versatile analyst with an M.S. in Analytics and 2+ years of enterprise experience at Invesco Ltd., combining hands-on IT operations (24/7 global infrastructure support, Active Directory, ServiceNow, Jira) with data analytics delivery (Power BI dashboards, SQL extraction, Python automation pipelines). Comfortable operating across both the IT support and data/BI tracks, having reduced incident recurrence by 15% through SQL-driven analysis and cut manual reporting effort by ~30% through Python automation. Seeking roles in Data Analytics, Business Intelligence, or IT Operations at a client-focused technology environment.

TECHNICAL SKILLS

- **Data & Analytics:** SQL (complex multi-table queries, joins, aggregations, data validation), Power BI (DAX, Power Query, star schema, time intelligence & also Certified), Python (Pandas, NumPy, Scikit-learn, PyTorch, FastAPI), Excel (pivot tables, VLOOKUP)
- **IT Operations & Support:** Active Directory (user/permissions management), ServiceNow (incident & service-request management), Jira & Confluence (ticketing, documentation), 24/7 infrastructure monitoring, onboarding/offboarding
- **ML & Advanced Analytics:** Classification (CNN, deep learning), predictive modeling, statistical analysis, trend analysis, root cause analysis
- **Tools & Platforms:** GitHub, Microsoft 365, Azure AD (familiar), Google Workspace (familiar)
- **Certifications:** Microsoft Power BI Data Analyst (PL-300) · SQL Associate (DataCamp) · PCEP - Certified Entry-Level Python Programmer · Python Data Associate (DataCamp) · Applied Data Science with Python Specialization (Coursera)

WORK EXPERIENCE

Infrastructure Engineer I — Data, Analytics & IT Operations

Invesco Ltd. · Hyderabad, India | Nov 2021 – Aug 2023

- **SQL Analysis & Reporting:** Authored complex multi-table SQL queries to extract, validate, & analyze operational data across APAC, EMEA, and North America; data-driven findings reduced incident recurrence by 15%.
- **Dashboard Development:** Designed & deployed interactive Power BI dashboards (DAX, star-schema models) tracking SLA achievement, incident volume, & resolution-time KPIs; adopted by leadership for performance management.
- **Reporting Automation:** Built Python (Pandas, NumPy) pipelines to automate data validation and recurring reports, cutting manual effort by ~30% and improving data accuracy.
- **IT Support & Incident Management:** Provided 24/7 first-line and escalation support across three global time zones; consistently ranked top in ticket closure and independent issue resolution via ServiceNow and Jira.
- **Access & Account Management:** Administered Active Directory and database access, managing user accounts, permissions, onboarding/offboarding, and access-control changes for a global workforce.
- **Root Cause Analysis:** Investigated data discrepancies and system failures; delivered prioritized RCA findings with actionable recommendations to cross-functional business and technical stakeholders.

KEY PROJECTS

Supply Chain Analytics Dashboard | Power BI · DAX · Power Query · What-If Parameters

- Analyzed \$36.78M supply chain dataset; identified 50%+ late-delivery rate representing \$20M+ in at-risk revenue; engineered What-If simulator showing profit uplift from \$1.15M → \$1.51M (+31%).

Toronto Winter Climate Analysis | Python · Pandas · Meteostat API · Power BI · DAX

- Sourced and merged historical climate data (Kaggle, 1937–2025) with live 2025–26 data via Meteostat Python API; handled schema normalization, NaN/mixed-type issues, and multi-source merging in Pandas.

- Built a 4-page interactive Power BI report (matrix heatmap, bookmark navigation, tooltip pages, sync slicers) to determine objectively whether the 2025–26 Toronto winter was harsher than historical norms, demonstrating end-to-end data storytelling from personal observation to data-backed conclusion.

Weather Image Classifier - ML Pipeline | Python · PyTorch · CNN · FastAPI

- Trained a CNN in PyTorch to classify weather conditions from images; deployed as a production REST API via FastAPI with a real-time HTML front-end for image upload and prediction.

EDUCATION

Master of Science in Analytics -- Northeastern University · Toronto, ON | 2023 – 2025

Bachelor of Engineering in Information Technology -- Osmania University · Hyderabad, India | 2017 – 2021

CURRENTLY LEARNING

- Microsoft Azure (AZ-900 Certification Prep) -- studying core cloud concepts, Azure services, and governance; actively preparing for the AZ-900 exam
- SQL & Python Problem Solving -- solving daily challenges on HackerRank and LeetCode to sharpen query optimization, data structures, and algorithmic thinking
- Databricks (Data Engineering & Lakehouse Architecture) -- actively working through Databricks Academy; exploring Delta Lake, Apache Spark, and notebook-based data pipelines
