

FARRUKH ALI KHAN

Data Analyst | SQL · Python · Power BI · Machine Learning
Toronto, ON | farrukh3ak@gmail.com | [LinkedIn](#) | [Portfolio](#) | [Github](#)

PROFESSIONAL SUMMARY

Data Analyst with an M.S. in Analytics (Northeastern University) and 2+ years of enterprise experience at Invesco Ltd., where I built Power BI dashboards, automated Python reporting pipelines, and used SQL to reduce incident recurrence by 15% across APAC/EMEA/NA operations. Skilled in translating complex datasets into clear business decisions. Seeking an entry-level Data Analyst or BI Analyst role in the Toronto market.

TECHNICAL SKILLS

- **Languages & Query:** SQL (complex queries, joins, aggregations), Python (Pandas, NumPy, Scikit-learn, PyTorch, FastAPI)
- **Visualization & BI:** Power BI (Certified), Tableau (familiar), Excel (pivot tables, VLOOKUP)
- **ML & Analytics:** Classification (CNN, deep learning), predictive modeling, statistical & trend analysis
- **Data Operations:** Data validation, root cause analysis, reporting automation, KPI tracking, data quality
- **Tools & Platforms:** Jira, Confluence, ServiceNow, GitHub, Active Directory,
- **Other:** Account Provisioning and Deprovisioning, SCCM, Patching, Troubleshooting, Incident Management, SLA Adherence, Root cause analysis
- **Certifications:** Microsoft Power BI Data Analyst (PL-300) · Python Data Associate (DataCamp) · SQL Associate (DataCamp) · PCEP – Certified Entry-Level Python Programmer

WORK EXPERIENCE

IT Technical Support Analyst & Data Operations | Infrastructure Engineer I

Nov 2021 – Aug 2023

Invesco Ltd. · Hyderabad, India

- **Incident Management & SLA Adherence:** Managed high-volume ServiceNow ticket queues across three global time zones, consistently ranked top in ticket closure (5,300+ tickets in first year); triaged, investigated, and resolved incidents within SLA targets while escalating to L2/L3 with full documentation.
- **SQL Data Analysis & Incident Prevention:** Authored complex multi-table SQL queries to extract and analyse operational data across APAC, EMEA, and NA; identified recurring failure patterns that contributed to a 15% reduction in incident recurrence.
- **Dashboard Development:** Designed and deployed interactive Power BI dashboards (DAX, star-schema data models) tracking SLA achievement, incident volume, and resolution-time KPIs; used by leadership to proactively close performance gaps.
- **Reporting Automation:** Built Python (Pandas, NumPy) pipelines to automate data validation and recurring operational reports, cutting manual effort by ~30% and improving data accuracy.
- **Identity & Access Management:** Managed full user lifecycle in Active Directory and Entra ID — creating, modifying, and deprovisioning accounts, assigning permissions, and ensuring access aligned with security policies and onboarding/offboarding workflows.
- **Endpoint & Device Management:** Deployed and maintained software across endpoint devices using SCCM; handled patching cycles, software installations, hardware troubleshooting, and asset record maintenance across a large multi-site environment.

- **Knowledge Base & Documentation:** Collaborated with L2 and L3 engineers to author KB articles for recurring Autosys job failures, improving first-contact resolution rates by 23% and reducing repeat escalations.
- **Vendor & Stakeholder Coordination:** Coordinated with internal security teams, application owners, and external vendors to resolve access issues and service requests; communicated resolution timelines clearly to non-technical stakeholders.

PROJECTS

Toronto Winter Analysis Dashboard | *Python · Pandas · Meteostat API · Power BI · DAX*

- Engineered a multi-source dataset by combining a Kaggle historical climate archive (1937–2025) with live 2025–26 data pulled via the Meteostat Python API; handled schema normalization, NaN resolution, and multi-source merging in Pandas.
- Built a 4-page interactive Power BI report using DAX calculated columns, bookmark navigation, tooltip pages, and sync slicers to compare 2025–26 Toronto winter temperatures against 88 years of historical norms.
- Translated a personal newcomer observation ("this winter felt unusually harsh") into a data-backed narrative demonstrating end-to-end analytical thinking from hypothesis to visual proof.

Supply Chain Analytics Dashboard | *Power BI · DAX · Power Query · What-If Parameters*

- Analysed the DataCo Smart Supply Chain dataset (\$36.78M total sales); identified that 50%+ of orders were delivered late, representing \$20M+ in at-risk revenue.
- Built a 4-page dashboard (Executive Summary, Delay Detective, Profit Profile, Strategic Simulator) using star-schema data modelling and advanced DAX measures.
- Engineered an interactive What-If simulator allowing stakeholders to adjust shipping mix, discount rates, and inventory levels; simulated scenario increased profit from \$1.15M → \$1.51M (+31%, +\$356K).

Spotify Listening Behavior Analysis | *Power BI · DAX · Power Query · Time Intelligence*

- Modelled personal Spotify streaming history (2025 – Feb 2026) in a star schema with a full date table; built slicers for dynamic year/month filtering.
- Developed DAX measures for total hours played, unique artist count, previous-month comparison, and percentage contribution of top artists.
- Revealed peak listening windows by hour of day and day of week, demonstrating end-to-end BI storytelling from raw data to actionable user-behaviour insight.

Weather Image Classifier - End-to-End ML Pipeline | *Python · PyTorch · CNN · FastAPI · Jupyter Notebook*

- Designed and trained a Convolutional Neural Network (CNN) in PyTorch to classify weather conditions (sunny, rainy, cloudy, foggy) from images.
- Deployed the trained model (weather_modelF.pth) as a production-ready REST API using FastAPI, with an HTML front-end for real-time image upload and prediction.
- Documented full ML pipeline (data preparation → model training → evaluation → API deployment) in a structured Jupyter Notebook and academic report (EAI6020).

EDUCATION

Master of Science in Analytics -- <i>Northeastern University · Toronto, ON</i>	2023 – 2025
Bachelor of Engineering in Information Technology -- <i>Osmania University · Hyderabad, India</i>	2017 – 2021
